Chilly mornings, cool evenings, harsh winds & rainy days – Yep, it's winter time in Toowoomba.

While Australia definitely doesn't get anywhere near as cold as some other countries do in winter, there are a few things to keep in mind to keep your vehicle in top working condition during the cold winter months.

Windscreen Wipers - Make sure your car's windscreen wipers are in top working condition, as rainy winter days will be dangerous if you can't see through your windshield properly. Worn windscreen wipers may leave streaks and marks on your windshield, so be sure to replace the blades.

Car Batteries - Cold months are hard on car batteries. The colder temps mean that the car's fluids are thicker and hence the battery uses more power to get things moving. Conduct a checkup of your battery. Posts and terminals should be spotless, with no signs of corrosion, and the battery shouldn't be running low on water.

Call in for a FREE battery check!

Sign up for roadside assistance - Nothing's worse than breaking down in the middle of nowhere on a cold, wet night. You'll be thankful should the worst happen.

Headlights – Dark mornings and evenings are another dangerous hazard in winter, so even though it seems like an obvious one, make sure your headlights and tail lights are all working properly.

In addition to making sure your car is in tip top condition, take extra care to practice safe driving while out on the roads. Don't drive too close to cars in front of you in dark, stormy or foggy weather (slippery roads and reduced visibility can be a recipe for disaster), and make sure your tyres are inflated correctly with plenty of grip left in the rubber. Of course, regular car maintenance is the key to ensuring your car is in perfect working condition year-round.

Once your car is set for the cool weather, all that's left to do is to pour yourself a nice hot coffee to warm yourself up during those cold winter drives!

→The tiny droplets of water that make up fog are so small that it would take seven billion of them to make a single tablespoonful of water.

→In Australia, Canberra wins the title of the 'Foggiest' capital city with an average of 47 fogs each year.
